UNIFIED PLANT OPERATIONS

eSIRMCA

Safety Incident Reporting & Multiple Cause Analysis

Stop safety incidents from repeating: find the real causes, fix them, and carry the fix everywhere the risk exists.

THE PROBLEM

- Paper forms and Excel files in separate places
- Delayed or missing incident and near-miss reports
- Surface-level fixes that ignore root causes
- Follow-ups missed because no one owns them

WHAT YOUR PLANT GETS

- Incident reporting for employees and contractors, with photos
- Guided MCA: standards check across Equipment, Material, Human and Method
- Why-Why root cause and Human Factor Analysis, checked before submission
- Two-step MCA approval, follow-ups with reminders, and reapplication
- Stoplight and Safe Days, heatmaps, trends and MCA reports

HOW IT WORKS

1. Report	2. Check	3. Analyze	4. Approve	5. Follow up
Capture the incident.	Verify basic standards.	Why-Why and human factors.	Two-step MCA approval.	Close actions and reapply.

PROVEN PLANT BY PLANT

> eSIRMCA was built in 2018 for a new U.S. plant of a Fortune 50 manufacturer. Safety leaders at other plants heard about it from colleagues and asked for the same. It is now **in use at a growing number of that manufacturer's U.S. plants and at a Fortune 500 agribusiness leader**.

WHAT PLANTS ADD NEXT

SNMC · **ePS** · **eHSE** · **ePV Pipe**

GETTING STARTED

Discovery, configuration, historical data import, training, go-live and direct support from the engineers who build HCONN. Annual subscription, scoped to your plant.
